

## **Renewable Energy Sources**

Hydrogen also can be found in many organic compounds, as well as water. It is the most abundant element on the earth. However, it does not occur naturally as a gas. It is always combined with other elements. Hydrogen can be burned as a fuel or converted into electricity. Not all the renewable energy resources come from the sun.

Geothermal energy taps the earth internal heat for a variety of uses including electric power production, and the heating and cooling of buildings.

The energy of the ocean's tides comes from the gravitational pull of the moon and the sun upon the Earth. It is what we called moon embracing the sun.
