

## Renewable Energy News

A small battery manufacturer says they now have a battery to be used in electric vehicles which will allow the vehicle to travel for 320 km (200 miles) before it needs charging. They hope to go into production in three years.

Renault has developed a wireless charging system for your electric car.

There are now two reports from NASA confirming extreme weather conditions is caused by Global Warming.

Outages in India at the end of last month, has cost the country a fortune. Nearly 800 million people were without power for two days. The Grid tripped. People were outraged because of money lost. In San Diego not so long ago the same thing happened, except it was an employee who turned off the power by mistake. It's a shame people don't act with the same outrage to save the planet! From our perspective it shows why micro grid systems are needed.

If we act now and fast to reduce carbon production, the ozone layer can repair itself.
