

The Source of Power of Mindanao Maria Cristina Falls

A majestic waterfall this is truly a great art of nature. You can see its power and the same time, the beauty is entices the onlookers with massive trees and flowers around. Also, you will never worry about security because the place is well kept and guarded so you will have fun and the same time safe. The Maria Cristina Falls is located in Iligan City, referred to as the “City of Waterfalls”. Maria Cristina Falls plummets over a 320-foot high precipice into a basin that runs downhill to the Agus VI Hydroelectric Power Plant that provides electric energy for all Mindanao due to the proximity of the hydroelectric power plant. As the water exits the first hydroelectric power plant, it courses down a deep river into a small lake which is behind a second hydroelectric power plant. It then exits the second power plant rushes head-long down to Iligan Bay. This is God’s gift. Imagine this falls providing hydroelectric power to Mindanao.
