

PowerPal Micro-Hydro Products

Asian Phoenix Resources Ltd., a Canadian Company based in Victoria, BC, commenced marketing the PowerPal range of micro-hydro products in 1998. The product range is manufactured in Hanoi, Vietnam, where there is a long history of Government involvement in micro-hydro research and development.

Starting with the well-known low head propeller turbine with a permanent magnet alternator as the power source (from 200 to 1000 watts), the Company has gradually expanded its product range to include various high head turbo-wheel models as well as cross-flow and semi Kaplan designs for sites with lower heads and moderate flow rates.

Sales have been made to some 85 countries worldwide, but marketing efforts are concentrated on the less developed countries, where to have access to some inexpensive electricity from a clean, renewable energy source (running water) is indeed a luxury for the local residents.

Prices to these countries are deliberately kept as low as possible, and with the financial assistance of such funding agencies as the World Bank, UNDP, various local Governments, NGOs, missionary groups and the like, PowerPals are now quite literally bringing light to many remote communities for the very first time.
